TECHNICAL SKILLS

Backend: Python, Django, DRF, **Microservices**, **RESTful API Design**, **JWT/OAuth2**
Frontend: React, Next.js, Tailwind CSS
Data & Ops: PostgreSQL, **Data Modeling**, Redis, Celery, **CI/CD**, Docker, Nginx
General: **Unit Testing (PyTest)**, Git, HLS Streaming, RevenueCat

WORK EXPERIENCE

Junior Backend Developer | Join Venture AI Nov 2025 – Present

- Architected the core backend for an AI-driven watch verification tool, maintaining stability under **500+** concurrent users.
- Developed the image processing pipeline that keeps production API uptime consistently at **99.9%**.
- Offloaded heavy AI inference tasks to Celery workers, making the application feel significantly faster and more responsive for users.
- Configured RevenueCat to manage the full subscription lifecycle for a growing base of **500+** paying users.
- Reworked video delivery to use adaptive streaming, successfully shaving **35%** off initial load times.

Junior Backend Developer | DevXhub Sep 2024 – May 2025

- Built and maintained Django REST backends for **3** distinct client products, managing unique business logic for each.
- Collaborated with frontend teams to define clean API contracts, which helped the team ship new features much faster.
- Hardened security across **50+** endpoints using role-based permissions and strict token validation.
- Fixed slow database queries by implementing targeted indexing and better schema design, bringing down average response times.

PROJECTS

ChronoVerify | AI Watch Authentication *Django, Redis, Celery, RevenueCat* | [Link](#)

- Decoupled AI analysis from the request cycle using Celery, providing users with instant responses instead of long waits.
- Scaled the platform to reliably handle over **10,000+** monthly status checks and image uploads.

DramaTube | Video Streaming Platform *Django, Redis, Celery, Signals, FFmpeg, HLS*

- Implemented HLS-based adaptive streaming to ensure quick video starts and quality adjustments based on connection speed.
- Built a background system that churns through **300+** daily video processing tasks using Redis-backed workers.

Reactides | Healthcare E-commerce *Django, Websockets, PostgreSQL* | [Live Link](#)

- Built the cart system from scratch using session-based storage and wired up Zelle so orders could be verified securely before processing.
- Hooked into Django signals to automatically trigger order notifications, so customers get updates the moment their order status changes.

EDUCATION & CERTIFICATIONS

2017 – 2021	B.Sc. in Computer Science & Engineering	Daffodil International University
2026 – Present	Full Stack Development (Django & React)	Ostad (In Progress)
